

Comparison of two webpages:

When I compare the wireframe to the website that I created these are the differences:

- Color wireframe is grey with no accent colors the colors I used were #cf0c01 (red) and #0378a6 (blue).
- I changed the font style to Gill Sans on my website
- In the Nav bar I changed the color of the home link to a stay blue, so the user knows what page they are on.
- In the footer I made the text smaller
